

Invites all faculty to a lunchtime workshop:

KEYS TO SUCCESSFUL PROJECT MANAGEMENT – A FACULTY APPROACH

Managing a project, grant and/or a lab can be daunting from many angles, and understanding the scope of project management is essential to a successful researcher. Myriad balls need to be juggled, including your budget, hiring and managing students and staff, adhering to funding agency deadlines, establishing timelines, dealing with conflicts, sharing space, setting up equipment or field sites, collaborating (and getting along with!) with co-PIs both on and off campus, accessing University resources, etc. Facilitators include **Candace Oviatt**, Professor, Oceanography, **Art Gold**, Professor, Natural Resources Science, and **Faye Boudreaux-Bartels**, Professor and Chair, Electrical and Biomedical Engineering.

All faculty, men and women, new and seasoned researchers and project managers, are welcome. Please join your colleagues for lunch, compliments of ADVANCE

**Tuesday, April 22, 2007
12:30 – 2:00 pm
University Club – Rhode Island Room**
