**Student Learning, Outcomes Assessment, and Accreditation**

**University of Rhode Island's Outcomes Assessment Solution,  
TrueOutcomes™**

The state of RI has recently adopted TrueOutcomes™ as their Web-based assessment solution. This tool allows users, academic programs at URI and RIC, to demonstrate their achievements in relation to a pre-determined set of principles or standards while linking administrators, faculty, students, alumni, and external stakeholders through flexible assessment instruments.

TrueOutcomes™ software provides users with a template-driven customizable Web interface. This tool will advance effective evaluation of program-wide growth based upon established standards and goals.

**Moving into the Culture of Evidence**

Program Goals are supported by the electronic collection of student work where this work supports class objectives and program outcomes. Data collection is made easy because students submit assignments electronically which are then graded online using faculty defined rubrics.

Impressive data mining tools are also available with only a few clicks of a mouse: reports generated by the assessment manager assist academic departments to improve curricula and pedagogy in courses and programs.
