h the Bay, river, pond, water supply].

[City/town] R.I. – [date] – On [date] students from [name of school] helped Save the Bay volunteers mark [#] stormdrains in [section of City/Town]. The goal of the stormdrain marking was to teach the students that when it rains, the water flowing down the street picks up oil and grease, trash, and other pollutants that have collected on parking lots, building roofs and roads. This dirty water then flows through the stormdrain system and into [Bay, river, pond, water supply] without treatment. The Town hopes that stormdrain markers also will make other citizens aware that stormdrains are not places to dump trash, as the stormdrain system flows directly into [the Bay, river, pond, water supply] without treatment of any kind. “I had no idea that those holes in the street eventually connected to the Bay.” [or other quote from student]
