

# Newport Water and Stone Bridge Fire District Source Water Assessment

University of Rhode Island Cooperative Extension in cooperation with RI Health Source Water Assessment Program

## **Acknowledgements**

This assessment was conducted in partnership with the Newport Water Division, Stone Bridge Fire District, municipal officials representing watershed communities, staff of RI HEALTH and the RI Department of Environmental Management, the Eastern RI Conservation District, other nonprofit organizations promoting conservation and environmental stewardship of watershed resources, and many other citizen volunteers. These volunteers made significant contributions to the mapping and assessment work. They reviewed draft maps, commented on preliminary assessment results, offered valuable insights on local water quality concerns, and offered practical suggestions to better protect source waters. While we have tried to incorporate local comments to the extent possible, any errors or omissions are the sole responsibility of the authors. The findings and recommendations were developed based on discussions with the assessment volunteers but represent the best professional judgment of the authors based on available data, modeled assessment results and supporting scientific literature, and do not necessarily reflect municipal, URI or RI HEALTH policies..

As the State SWAP Program Coordinator and project manager, Clay Commons provided essential support throughout this project, which included assistance in developing risk analysis procedures, making RI HEALTH technical reports available, organizing public outreach, and participating in the assessment process. Debra LaFleur made public well monitoring data readily available and helped us interpret this rich database. June Swallow, Chief Office of Drinking Water Quality and EPA Region 1 project officer, Buddy Souza, provided support and direction throughout the project.

Dr. Arthur Gold, Professor in the Natural Resources Science Department and Extension Water Quality Program served as scientific advisor on this project. Dr. Gold oversaw development of the assessment approach and provided guidance in evaluating pollution risks and interpreting modeled results. Other key URI staff who contributed to the assessments include Dorothy Q. Kellogg, who provided support in modifying the MANAGE nutrient loading spreadsheet for SWAP assessments. Holly Burdett and Alyson McCann assisted in public outreach and trained volunteers to update land use maps used in the assessment. Kaytee Manchester, URI Coastal Fellowship Program intern, assisted in GIS mapping and well data analysis. Emmanuel Falck also assisted in final well data analysis and report editing. The URI Environmental Data Center provided direct access to the RIGIS database and the Center's knowledgeable staff generously provided technical support in GIS database development and mapping.

## **Newport Water and Stone Bridge Fire District Source Water Assessment**

### **Prepared for:**

RI HEALTH  
Office of Drinking Water Quality  
3 Capitol Hill  
Rm. 209 Cannon Building  
Providence, RI 02908-5097

This report and a fact sheet summarizing results are available to view or download at the URI Cooperative Extension website and RI HEALTH websites. Large format maps of the water supply areas developed to inventory natural features and map potential pollution sources are available for review at municipal offices.

Funding for this report was provided by the RI HEALTH Office of Drinking Water Quality through a grant from the U.S. Environmental Protection Agency under the Source Water Assessment Program, established by the 1996 amendments to the federal Safe Drinking Water Act.

This is Technical Report #03-02, Contribution 3987 of the University of Rhode Island College of Environment and Life Sciences and Rhode Island Cooperative Extension. URI Cooperative Extension provides equal program opportunities without regard to race, age, sex or preference, creed or disability...

# Newport Water and Stone Bridge Fire District Source Water Assessment

## Table of Contents

	<i>Page</i>
1. Introduction	1
1.1 Assessment Study Areas	4
1.2 Summary of Existing Conditions	9
2. Assessment Method	11
2.1 Two Levels of Assessment	11
2.2 Background on assessing water quality impacts	12
2.3 Approach: Linking Landscape Features to Pollution Risks	14
2.4 Database Development	17
2.5 Assessment Steps	18
3. Pollution Risk Results	21
3.1 Linking land use to water quality	21
3.2 Landscape / Land Use Risk Indicators	25
1. High Intensity Land Use...	25
2. Impervious Cover	28
3. Forest and Wetland	31
4. Shoreline Land Use	34
5. Soils	37
3.3 Runoff and Nutrient Loading Estimates	41
1. Surface Runoff	44
2. Nutrient Loading	47
3.4 Mapping Pollution Risks	55
3.5 Summary Results	58
4. Source Water Protection Tools	65
4.1 Factors to Consider in Selecting Management Practices	66
4.2 Management Actions for Municipal Officials	70
4.3 Management Actions for Water Suppliers	89
4.4 What Residents, Landowners and Businesses Can Do	90
REFERENCES	93

## **LIST OF APPENDICES**

- A RI Source Water Assessment Program, Methods and Assumptions in ranking public water supply susceptibility
- B Susceptibility Ranking Worksheet
- C Sampling Data Analysis and Rating
- D Public Participation in the Assessment Process
- E Existing Condition of Surface and Ground Water Resources
- F Current and Future Land Use Estimates
- G Characteristics of Rhode Island Soils
- H RIGIS Coverages used in the MANAGE Assessment of Major Community Supplies
- I MANAGE Summary Results
- J MANAGE GIS-Based Pollution Risk Assessment Method, Watershed / Aquifer Pollution Risk Indicators
- K Hydrologic and Nutrient Loading Assumptions

## LIST OF FIGURES

1a.	Estimated High Intensity Land Use: Aquidneck Island	26
1b.	Estimated High Intensity Land Use: Tiverton and Little Compton	27
2a	Estimated Impervious Surface Area: Aquidneck Island	29
2b	Estimated Impervious Surface Area: Tiverton and Little Compton	30
3a	Estimated Forest and Wetlands Cover: Aquidneck Island	32
3b	Estimated Forest and Wetlands Cover: Tiverton and Little Compton	33
4a	Estimated High Intensity Land Use in Riparian Buffer: Aquidneck Island	35
4b	Estimated High Intensity Land Use in Riparian Buffer: Tiverton and Little Compton	36
5a	Estimated Percent of Soil by Hydrologic Group: Aquidneck Island	38
5b	Estimated Percent of Soil by Hydrologic Group: Tiverton and Little Compton	39
6a	Estimates of Groundwater Recharge and Surface Water Runoff: Aquidneck Island	45
6b	Estimates of Groundwater Recharge and Surface Water Runoff: Tiverton and Little Compton	46
7a	Estimated Nitrogen Loading to Groundwater: Aquidneck Island	49
7b	Estimated Nitrogen Loading to Groundwater: Tiverton and Little Compton	50
8a	Estimated Phosphorus Loading to Surface Water Runoff: Aquidneck Island	52
8b	Estimated Phosphorus Loading to Surface Water Runoff: Tiverton and Little Compton	53
9a	Phosphorus Contributions from Different Land Uses: Aquidneck Island	54
9b	Phosphorus Contributions from Different Land Uses: Tiverton and Little Compton	54

**LIST OF MAPS**

1.	Public Water and Sewer Utilities	2
2.	Aquidneck Island Drinking Water Supply Watersheds	4
3.	Aquidneck Island Drinking Water Supply Watersheds	5
4.	Nonquit Pond and Watson Pond Drinking Water Watersheds	7
5.	Stafford Pond Drinking Water Supply Watersheds	8

**LIST OF TABLES**

1.	Summary of Current and Future Land Use Risks – Aquidneck Island Drinking Water Supply	61
2.	Summary of Current and Future Land Use Risks – Tiverton and Little Compton	63
3.	Summary of Standard Buffer Widths for Water Quality Protection	78
