Acknowledgements

This assessment was conducted in partnership with the with the Block Island Water Company, municipal officials, and staff of RI HEALTH and the RI Department of Environmental Management. While we have tried to incorporate local comments to the extent possible, any errors or omissions are the sole responsibility of the authors. The findings and recommendations summarized in the assessment fact sheet represent the best professional judgment of the authors based on available data, modeled assessment results and supporting scientific literature, and do not necessarily reflect municipal, URI or RI HEALTH policies.

As the State SWAP Program Coordinator and project manager, Clay Commons provided essential support throughout this project, which included assistance in developing risk analysis procedures, making RI HEALTH technical reports available, organizing public outreach, and participating in the assessment process. Debra LaFleur made public well monitoring data readily available and helped us interpret this rich database. June Swallow, Chief Office of Drinking Water Quality and EPA Region 1 project officer, Buddy Souza, provided support and direction throughout the project.

Dr. Arthur Gold, Professor in the Natural Resources Science Department and Extension Water Quality Program served as scientific advisor on this project. Dr. Gold oversaw development of the assessment approach and provided guidance in evaluating pollution risks and interpreting modeled results. Other key URI staff who contributed to the assessments include James Lucht who assisted with initial GIS database development and assessment. Dorothy Q. Kellogg provided support in modifying the MANAGE nutrient loading spreadsheet for SWAP assessments. Emmanuel Falck assisted in final well data analysis and report editing. The URI Environmental Data Center provided direct access to the RIGIS database and the Center's knowledgeable staff generously provided technical support in GIS database development and mapping.
