

# Methods Group Day 1 Introduction

Theodore Walls, PhD; Facilitator

September 10, 2007

# Methods Group

- ▶ People who are interested in methodological problems attend regularly (or at least infrequently)

# Methods Group

- ▶ People who are interested in methodological problems attend regularly (or at least infrequently)
- ▶ Present and hear presentations, and work together to increase knowledge of methodological topics equality

# Methods Group

- ▶ People who are interested in methodological problems attend regularly (or at least infrequently)
- ▶ Present and hear presentations, and work together to increase knowledge of methodological topics equality
- ▶ Possible outcomes are advances in individual research programs, increased knowledge, and identification of collaborative opportunities

# Heritage

- ▶ Open source communities sharing information without personal or organizational stake in content ownership; material developed by everyone, for everyone

# Heritage

- ▶ Open source communities sharing information without personal or organizational stake in content ownership; material developed by everyone, for everyone
- ▶ On-line communities take up the process

# Heritage

- ▶ Open source communities sharing information without personal or organizational stake in content ownership; material developed by everyone, for everyone
- ▶ On-line communities take up the process
- ▶ Reliance on precepts of contribution, sharing and competence

# Heritage

- ▶ Open source communities sharing information without personal or organizational stake in content ownership; material developed by everyone, for everyone
- ▶ On-line communities take up the process
- ▶ Reliance on precepts of contribution, sharing and competence
- ▶ Similar groups at MIT and Penn State in which I have been a participant

# How to participate in a *dialogue*

- ▶ Not debate or persuasion; not con-vers-ation

## How to participate in a *dialogue*

- ▶ Not debate or persuasion; not con-vers-ation
- ▶ “what if we could try ...” Add to a container in our midst (David Bohm)

## How to participate in a *dialogue*

- ▶ Not debate or persuasion; not con-vers-ation
- ▶ “what if we could try ...” Add to a container in our midst (David Bohm)
- ▶ “what happens if you were to do you do it this way...” (Bakhtin)

## How to participate in a *dialogue*

- ▶ Not debate or persuasion; not con-vers-ation
- ▶ “what if we could try ...” Add to a container in our midst (David Bohm)
- ▶ “what happens if you were to do you do it this way...” (Bakhtin)
- ▶ Non-threatening and advertently supportive environment (does not mean do not offer critically reasoned perspectives)

## How to participate in a *dialogue*

- ▶ Not debate or persuasion; not con-versation
- ▶ “what if we could try ...” Add to a container in our midst (David Bohm)
- ▶ “what happens if you were to do you do it this way...” (Bakhtin)
- ▶ Non-threatening and advertently supportive environment (does not mean do not offer critically reasoned perspectives)
- ▶ Communication that allows students and teachers to learn from one another in an environment characterized by respect and equality (Freire)

## Specific Guidelines

- ▶ Arrive on time (11:50?)

## Specific Guidelines

- ▶ Arrive on time (11:50?)
- ▶ Plan to present a 40 minute presentation at some point during the year covering work at any stage, with a bias toward *in progress work*

## Specific Guidelines

- ▶ Arrive on time (11:50?)
- ▶ Plan to present a 40 minute presentation at some point during the year covering work at any stage, with a bias toward *in progress work*
- ▶ Present work that you would like input on methods around

## Specific Guidelines

- ▶ Arrive on time (11:50?)
- ▶ Plan to present a 40 minute presentation at some point during the year covering work at any stage, with a bias toward *in progress work*
- ▶ Present work that you would like input on methods around
- ▶ Contribute to a climate of openness and learning

# Operating Systems

- ▶ Linux <http://www.linux.org/> (read more about GNU)

# Operating Systems

- ▶ Linux <http://www.linux.org/> (read more about GNU)
- ▶ DOS as a common ingredient

# Operating Systems

- ▶ Linux <http://www.linux.org/> (read more about GNU)
- ▶ DOS as a common ingredient
- ▶ Web-authoring tools such as PHP and MySQL

# Operating Systems

- ▶ Linux <http://www.linux.org/> (read more about GNU)
- ▶ DOS as a common ingredient
- ▶ Web-authoring tools such as PHP and MySQL
- ▶ Multiplatform hardware and software

# Scientific Publishing Software

- ▶ Latex

# Scientific Publishing Software

- ▶ Latex
- ▶ Use for presentations, books, scientific papers, grant proposals

# Scientific Publishing Software

- ▶ Latex
- ▶ Use for presentations, books, scientific papers, grant proposals
- ▶ Other uses: Musical notation, other languages (including dead languages),

# Scientific Publishing Software

- ▶ Latex
- ▶ Use for presentations, books, scientific papers, grant proposals
- ▶ Other uses: Musical notation, other languages (including dead languages),
- ▶ Use with an editor (such as wineot, emacs), compiler, and viewer (such as pdf)

# Statistical Computing Software

- ▶ R Project <http://www.r-project.org/> also <http://www.uri.edu/faculty/walls/Rsoftware.htm>

# Statistical Computing Software

- ▶ R Project <http://www.r-project.org/> also <http://www.uri.edu/faculty/walls/Rsoftware.htm>
- ▶ Use for basic analyses through advanced

# Statistical Computing Software

- ▶ R Project <http://www.r-project.org/> also <http://www.uri.edu/faculty/walls/Rsoftware.htm>
- ▶ Use for basic analyses through advanced
- ▶ Most emerging routines available in R first

# Statistical Computing Software

- ▶ R Project <http://www.r-project.org/> also <http://www.uri.edu/faculty/walls/Rsoftware.htm>
- ▶ Use for basic analyses through advanced
- ▶ Most emerging routines available in R first
- ▶ Can be downloaded or used in part on-line

# Summary of Open-source Computing

- ▶ Clear cost savings

# Summary of Open-source Computing

- ▶ Clear cost savings
- ▶ Ability to collaborate with more people in more places/disciplines

# Summary of Open-source Computing

- ▶ Clear cost savings
- ▶ Ability to collaborate with more people in more places/disciplines
- ▶ Importance for third world institutions and scientists

# Summary of Open-source Computing

- ▶ Clear cost savings
- ▶ Ability to collaborate with more people in more places/disciplines
- ▶ Importance for third world institutions and scientists
- ▶ Promote competence rather than reliance
